

Introducing SKYLINE SERIES Modular

GEO Flooring introduces Skyline Series, featuring: Atrium, Mezzanine, Multi-Storey and Observatory.

Inspired by the architectural and structural features found in skyscrapers; Skyline series exemplifies perfectly the spirit of the modern skyscraper, with this well executed series.

'Atrium is a delicate multi-coloured product simulating a broadloom effect through its sophisticated colouring. It is coloured with 4 different air-entangled yarns in a subtle stripe layout reminiscent of a tall skyscraper'.

'Mezzanine illustrates a grid structure of squares in the form of a checkerboard. With its soft colour combinations, the pattern resonates regular window structures of a building'.

'Multi-Storey is an undulating grid structure resembling the irregular window structures of a building'.

'An observation deck marks the top of the skyscraper, where the view of the city can be witnessed from an elevated platform. Observatory mimics the grandiose view in a large multi-faceted random pattern'.

More on Skyline Series is available from GEO Flooring.
