

VISUALLY STUNNING nora® INLAYS AT ESCHER MUSEUM

nora® Project Profile: Escher Museum – The Hague, The Netherlands

World famous Dutch graphic artist, M.C Escher (1898 – 1972) made a significant contribution to 20th century art, with an impressive body of work that often focused on optical illusion perspectives and 'impossible' perceptions. Escher continues to inspire new generations of artists to this day.

The compelling inlay in the visitors room of *The Escher Museum* (pictured above), consists of a phenomenal 2505 parts of **noraplan® uni** range - chosen specifically for this project. Visitors to the Museum are stunned by the three dimensional impact of this flooring installation – the perfect optical illusion.

Project details at a glance:
