

Quantum Guard HP® Resilient Flooring & Luxury Vinyl (LVT)

Quantum Guard HP® is the highest performing commercial urethane finish in the industry. The patented wear layer contains aluminum oxide, which provides unparalleled appearance retention, durability, stain resistance, and slip retardant properties when compared to standard resilient floors. Because the aluminum oxide is suspended throughout the wear surface, **Quantum Guard HP®** does not require a site applied polish.

Quantum Guard HP® resilient flooring provides the following specific advantages for aged care facilities:

- » Uniform no polish maintenance throughout facilities.
- » Reduces glare created by high gloss and highly buffed acrylic finishes.
- » Decreases time to clean critical care spaces - eliminates the need for repeatedly stripping and resealing.
- » Provides resistance to spills from hand sanitisers, which can stain and discolour products without a coating or with site-applied polish.
- » Protects visual aesthetics of the product over time.
- » Provides enhanced level of traction and protection against slip and falls compared to standard resilient sheet flooring.
- » Maintains excellent mobility for wheeled traffic.
